

## Auto Blend Layers

Today we will be leveraging the **Auto Blend Layers** functions to integrate multiple images seamlessly together. Choose two images that you wish to combine and add them into separate layers.

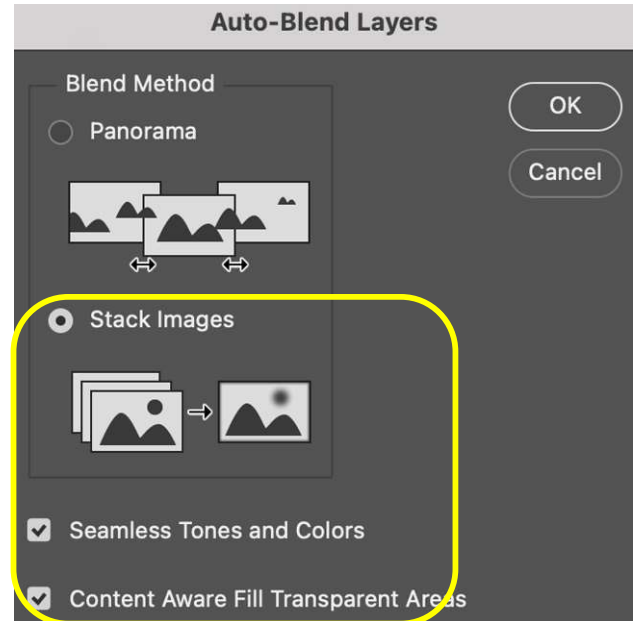

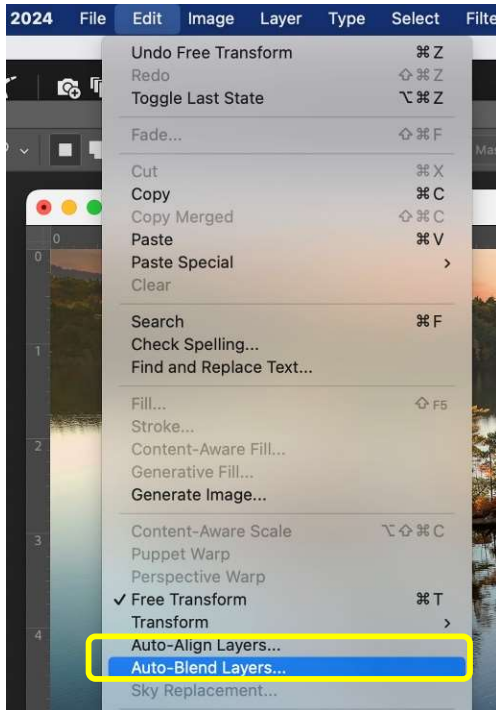

Use the main image as the background layer upon which we will overlay the secondary image on top. Select the upper overlay image and using the Lasso tool, select the specific area you wish to blend into the background scene.

## Auto Blend Layers

Choose **Edit / Auto Blend Layers** functions. In the resulting blending method dialog, select **Stack Images** and hit OK

Photoshop does its magic now and should result in a smoothly blended composite. You can make additional fine tuning edits in the resulting mask and camera raw tools as desired.

Here is a link to a You Tube video which illustrates this and other techniques that help, as well.
