

This month's Digital Technique is exploring the creative possibilities with a simple process leveraging Layers and Stylized Filters. Have fun with this assignment!

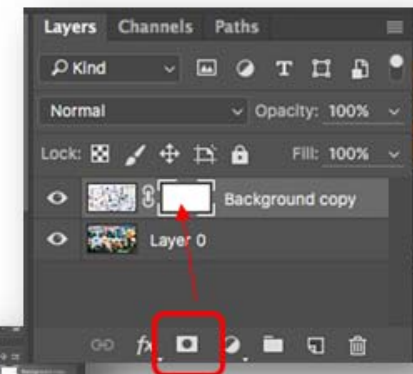

Chose a contrasty, colorful subject , load it and make a duplicate layer to work with

Use Filter / Stylize / Find Edges

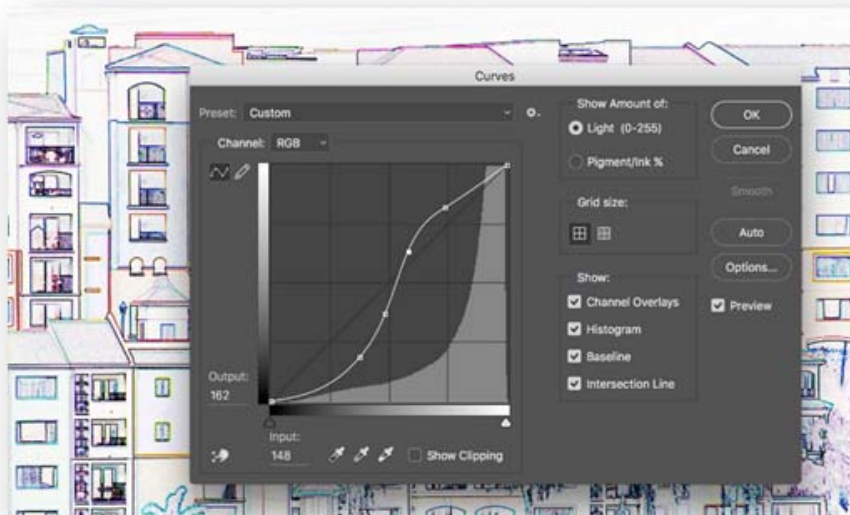

Add a mask

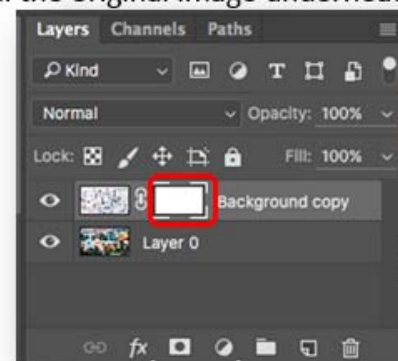

Do Control or Command M to bring up a curves adjustment and play with the look until happy

Grab a brush and paint black on the top layer mask to reveal the original image underneath as desired

Save as a .psd file with keeps the layer in case you want to play with it some more.

Make final adjustments in Camera Raw for clarity, vibrance as desired and save as a .jpg file to flatten the images

Try several and have fun!
