

## Magazine Cover Digital Technique

This month's Digital Technique is to create a magazine cover of any magazine you like. National Geographic and Time are pretty easy to do with the background colors noted and easy fonts for titles. Be creative and have fun with this assignment!

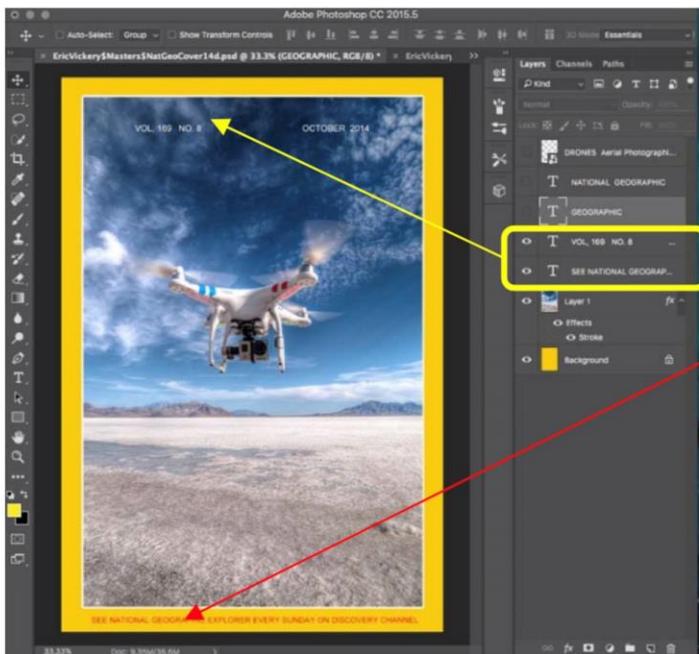

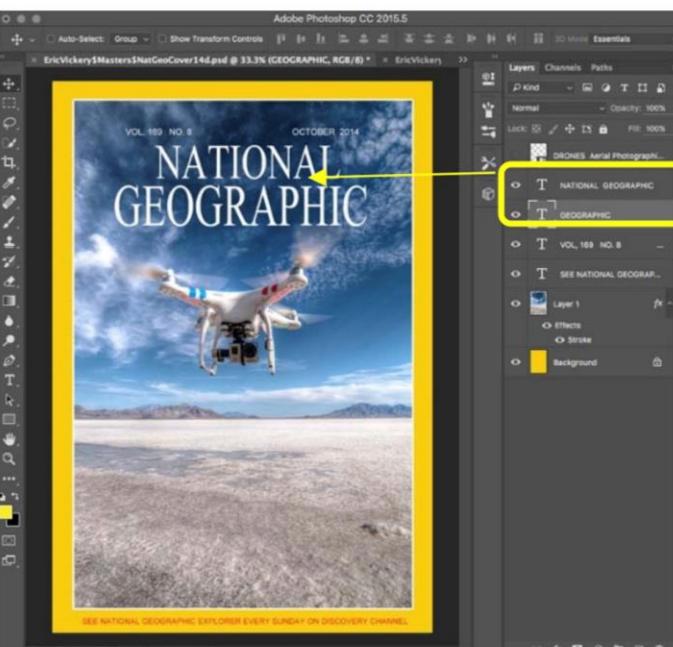

1. Start by doing File New, adding a layer and making a rectangle under Image Size of 1500 x 2200. Paint in the color Yellow using the color picker

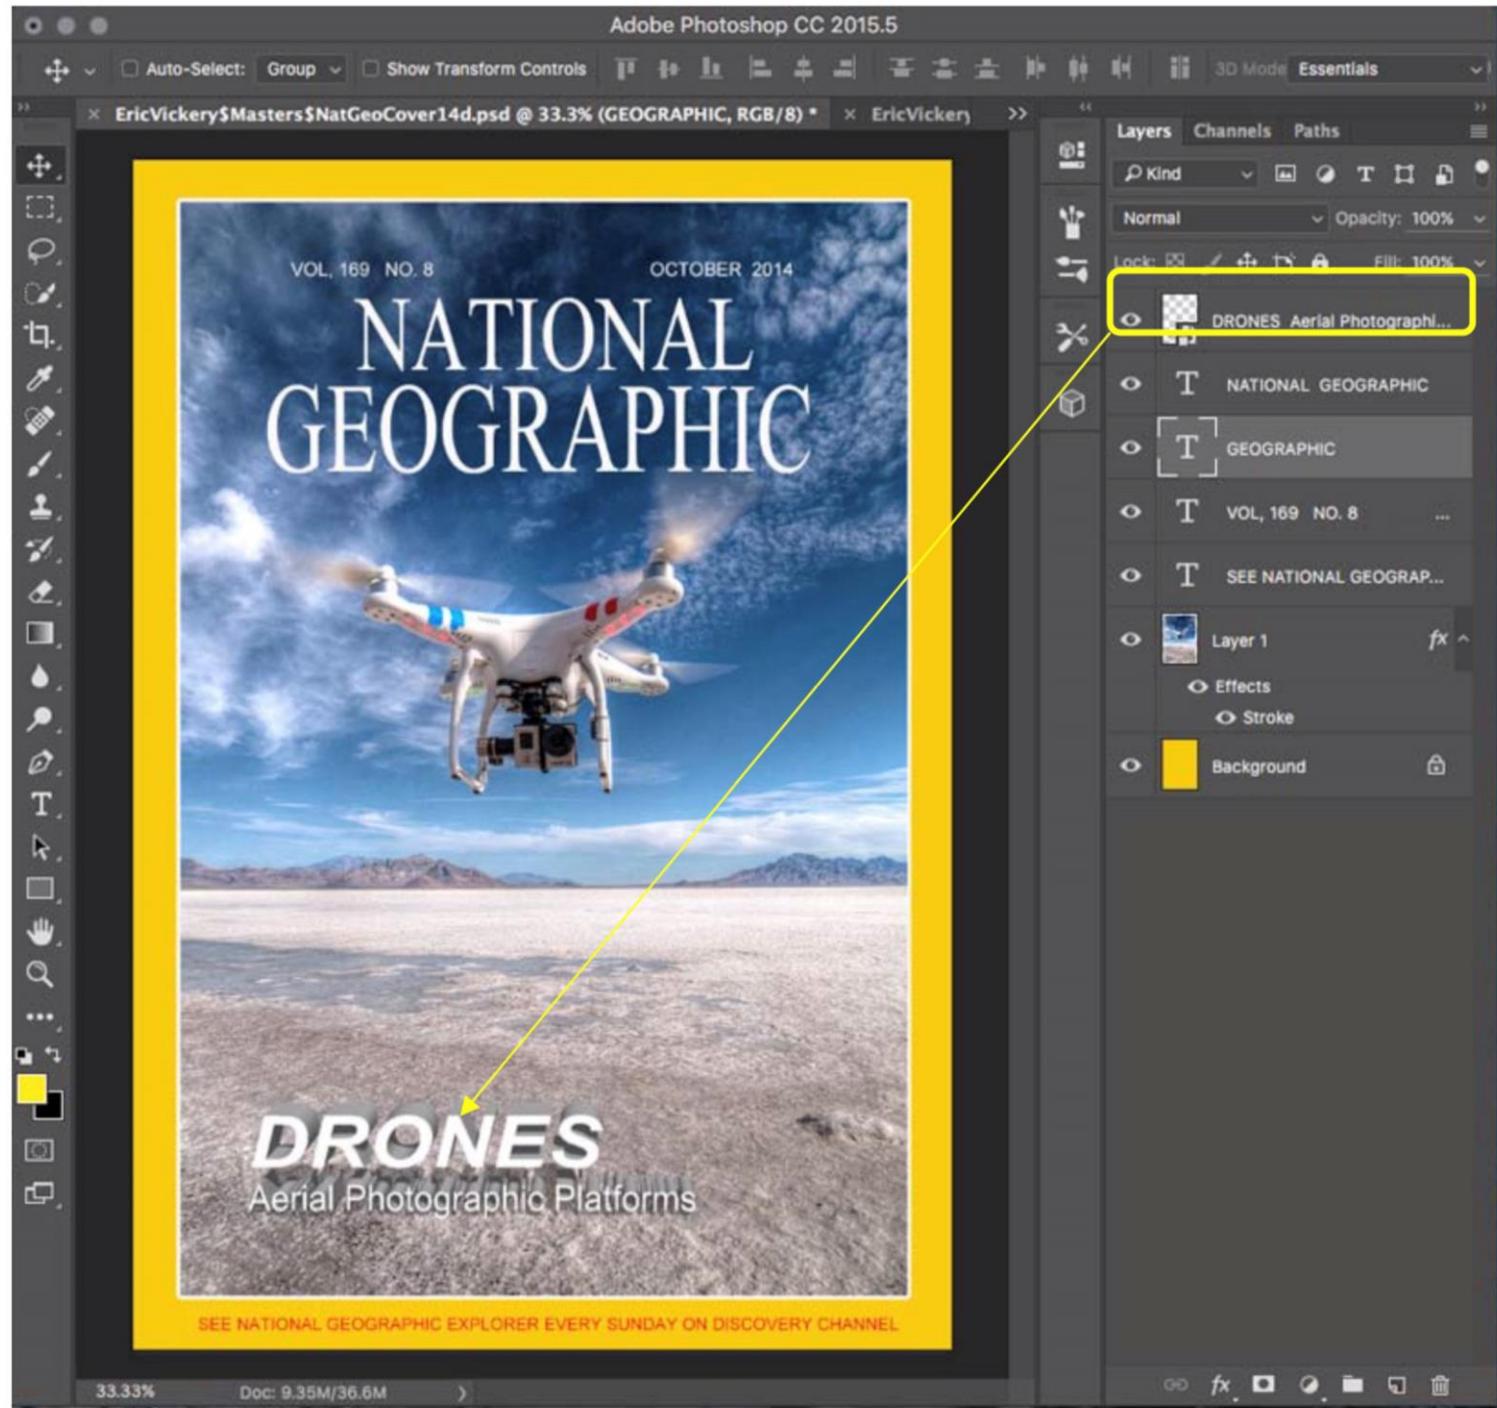

2. Add a Layer by copying in your photo for the cover shot. Size appropriately using Edit / Free Transform and add a Layer Style / Stroke to put a white border around it.

3. Add in additional layers and choose Text to add volume number, date and any other yellow band details you want

4. Add in another layer for the National Geographic title using the font "Times Roman" in capitals and appropriate size

5. Add in a final layer for any other feature titles that relate to the cover picture. Play with other fonts or 3D to make special emphasis

6. Save as a .psd to alter if needed and then flatten by also saving as .jpg. Make any final adjustments in Camera Raw and your done!

Have fun with this!
